

PI's: G. Ron, D. Higinbotham, J. Tyler

Executive Summary

It is requested that JSA fund an internship program which will allow undergraduates students from foreign countries to intern in JLAB for a 10 week period during the summer. The students shall be assigned a mentor from the JLAB staff who will supervise and direct their research activity during that time. A similar program, known as SULI, is funded by the DOE for US undergraduates and has been very successful at JLab.

This program will enhance the connection between JLAB and the foreign user community. Furthermore, this program will encourage undergraduate students to continue their graduate studies in JLab related fields of research.
